Monarch Butterfly Abundance Analysis: LLM Implementation

Part 1: Setup and Data Loading

```
library(tidyverse)
library(lubridate)
library(mgcv)  # for GAM models
library(corrplot)
library(knitr)
```

```
counts <- read_csv("../data/butterfly_abundance_index.csv")
```

```
Rows: 11885 Columns: 4
-- Column specification --------------------------------------------------------
Delimiter: ","
chr (2): deployment_id, image_filename
dbl (2): total_butterflies, butterflies_direct_sun

i Use `spec()` to retrieve the full column specification for this data.
i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

```
deployments <- read_csv("../data/deployments.csv")
```

```
Rows: 19 Columns: 23
-- Column specification --------------------------------------------------------
```

```
Delimiter: ","
chr (14): camera_name, wind_meter_name, Deployed_time, Recovered_time, notes...
dbl  (8): height_m, horizontal_dist_to_cluster_m, view_direction, cluster_co...
lgl  (1): monarchs_present

i Use `spec()` to retrieve the full column specification for this data.
i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

```r
temp <- read_csv("../data/temperature_data_2023.csv")
```

```
Rows: 56066 Columns: 6
-- Column specification --------------------------------------------------------
Delimiter: ","
chr (3): filename, deployment_id, extraction_status
dbl (3): timestamp, temperature, confidence

i Use `spec()` to retrieve the full column specification for this data.
i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

```r
wind <- read_csv("../data/wind_all.csv")
```

```
Rows: 681013 Columns: 5
-- Column specification --------------------------------------------------------
Delimiter: ","
chr  (2): db_path, wind_meter_name
dbl  (2): speed, gust
dttm (1): time

i Use `spec()` to retrieve the full column specification for this data.
i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

```r
cat("Data loaded successfully\n")
```

```
Data loaded successfully
```

```r
cat("Counts rows:", nrow(counts), "\n")
```

```
Counts rows: 11885
```

```r
cat("Deployments rows:", nrow(deployments), "\n")
```

```
Deployments rows: 19
```

```r
cat("Temperature rows:", nrow(temp), "\n")
```

```
Temperature rows: 56066
```

```r
cat("Wind rows:", nrow(wind), "\n")
```

```
Wind rows: 681013
```

Part 2: Initial Data Cleaning and Merging

```r
# Filter and select deployments data
deployments_filtered <- deployments %>%
  filter(label_status == "Complete") %>%
  mutate(view_id = as.factor(view_id)) %>%
  select(deployment_id, view_id, wind_meter_name)

cat("Filtered deployments to", nrow(deployments_filtered), "complete records\n")
```

```
Filtered deployments to 12 complete records
```

```r
# Parse timestamps in counts data
counts_with_datetime <- counts %>%
  mutate(
    datetime_str = str_extract(image_filename, "\\d{14}"),
    datetime = ymd_hms(datetime_str)
  ) %>%
  select(-datetime_str)

cat("Parsed", sum(!is.na(counts_with_datetime$datetime)), "valid timestamps\n")
```

```
Parsed 11885 valid timestamps
```

```r
# Create master dataframe
master_df <- counts_with_datetime %>%
  left_join(deployments_filtered, by = "deployment_id") %>%
  left_join(temp, by = c("image_filename" = "filename"))

cat("Master dataframe created with", nrow(master_df), "rows\n")
```

```
Master dataframe created with 11885 rows
```

```r
cat("Columns:", paste(names(master_df), collapse = ", "), "\n")
```

```
Columns: deployment_id.x, image_filename, total_butterflies, butterflies_direct_sun, datetime
```

```r
# Check for completeness
complete_records <- master_df %>%
  filter(!is.na(view_id) & !is.na(temperature) & !is.na(datetime))
cat("Complete records with all key fields:", nrow(complete_records), "\n")
```

```
Complete records with all key fields: 11885
```

Part 3: The Lagged Data Preparation Function

```r

### Model 6 : Full model

Model data dimensions after removing NAs: 5601 x 7
Variables in model: total_butterflies, abundance_t_minus_1, mean_wind_speed, mean_temp, sunli
View IDs with observations: 9
Min/Max observations per view: 13 / 2941
GAM fitted successfully
Model Summary:

Family: Negative Binomial(3.724)
Link function: log

Formula:
total_butterflies ~ s(abundance_t_minus_1, k = 4) + s(mean_wind_speed,
    k = 4) + s(mean_temp, k = 4) + s(sunlight_proportion, k = 4) +
    s(minutes_above_2mps, k = 4)
```
